

Meru Networks announces Consafe Logistics as a new integrator partner for wireless services across its organization

Meru's European presence grows stronger with another successful partnership

Stockholm – June 17, 2008 - [Meru Networks](#), the leader in mobility infrastructure for data, wireless voice (VoIP) and video, today announced its new partnership with European-based logistics solutions provider Consafe Logistics.

Annika Broberg, Regional Sales Manager for the Nordics for Meru describes the benefits of the partnership for Meru:

“We see the partnership with Consafe Logistics as extremely strategic. The long experience and the knowledge Consafe Logistics have in the warehouse and logistics field, combined with their understanding of wireless solutions, makes this partnership a great match.”

The move will see Meru expand its European presence within the Nordic market, a region where already 60% of its European revenue currently resides. It signifies yet another clear intention of Meru strengthening its European presence with offices already based in London, Paris and Stockholm.

Consafe Logistics is the Nordic region's leader in the field of providing efficient logistics solutions throughout supply chain and mobile solutions. They are currently among the Top 10 WMS (Warehouse Management Systems) worldwide and number 3 in Europe. They compete with companies such as Red Prairies and SAP within the WMS field and many of the popular IT companies within mobile solutions.

The partnership with Meru will help them to enhance their position to become the first choice for customers that use their supply chain to create competitive advantage. They already work with WLAN provider Motorola, however the move with Meru will allow them to utilize Meru's unique use of single channel technology.

Single Channel and Virtual Cell architecture is defined by Access Points that coordinate with one another to the extent that they don't interfere and can co-exist. This provides greater stability and robustness of the network – an economic benefit to customers and end-users.

Mikis Samaras, Consafe Logistics' Business Development Director adds:

“The partnership with Meru Networks and its unique technical portfolio will enhance our ability to provide best-in-class solutions in the area of wireless mobility.”

About Meru Networks

Meru Networks is the global leader in wireless mobility infrastructure solutions that enable the All-Wireless Enterprise for Fortune 500 educational, healthcare, enterprise, and government markets. Its industry-leading innovations deliver pervasive, robust wireless service for business-critical applications. Meru’s award-winning Air Traffic Control technology brings the benefits of the cellular world to the WLAN environment, and it offers the only solution on the market that delivers the reliability, scalability, and security necessary for converged voice and data services over a single WLAN infrastructure. Founded in 2002, Meru is based in Sunnyvale, California. For more information, visit www.merunetworks.com.
